

Shaikh Zaid Rahman

Kolkata, West Bengal • shaikhzaidrahman10b@gmail.com • 6290575310

EDUCATION

Institute of Leadership, Entrepreneurship, and Development (iLEAD)
Bachelor of Computer Applications (BCA), Currently in 2nd Year

Kolkata, West Bengal

Seventh Day Adventist Senior Secondary School
Higher Secondary Education (Class XII)

Kolkata, West Bengal

CERTIFICATIONS

13 Anthropic-Issued Certifications: Claude AI Fundamentals, Prompt Engineering & Advanced Techniques, Claude API Integration, Model Context Protocol (MCP) Development, Agentic Systems & Autonomous Agents, Claude Code IDE Tools, Vision Capabilities, Advanced Reasoning, System Design & Production Architecture, and specialized AI deployment certifications

EXPERIENCE AND PROJECTS

Freelance Web Development & AI Solutions
Independent Freelancer

June 2025 – December 2025

- Developed **25+ WordPress websites** with custom themes and plugins, achieving 35% improvement in client retention rate and 43% increase in website traffic
- Deployed **3 AI-powered voice agents** using Retell AI with 94% conversation completion rate and 82% user satisfaction increase, generating \$4,000–\$5,000 cost savings per client
- Automated entire cold calling and lead conversation process** using *n8n*, *Zapier*, and *Make* automation platforms integrated with CRM tools (*GoHighLevel*, *Follow Up Boss*)
- Crafted **advanced prompts** for cold calling agents and receptionist bots with comprehensive objection handling, ensuring precise expected outcomes through *strategic prompt engineering*

Managedia 2026 Landing Page Developer
iLEAD Tech Club Core Development Team

April 20, 2026 – May 8, 2026

- Built responsive landing page for inter-collegiate festival (managedia-2026.pages.dev), achieving 15,000+ unique visitors and 5,000+ event registrations
- Engineered **dynamic event filtering system** and optimized registration architecture for high-traffic processing
- Implemented modern frontend technologies delivering *intuitive user experience* across devices

Hackathon Competitions and Innovation Projects

CodeCure AI – SPIRIT 2026 (IIT BHU)

March 31, 2026 – April 4, 2026

- Built an **AI-driven drug toxicity screening tool** that predicts whether a candidate drug molecule is likely to be toxic across 12 different biological assays (Tox21 dataset), using molecular fingerprints generated through RDKit and an **XGBoost classification model**
- Achieved an average AUC-ROC of 0.797, indicating the model can reliably distinguish toxic from non-toxic compounds — a strong result for an early-stage screening tool
- Integrated **SHAP-based explainability** so researchers can see exactly which molecular features drove a toxicity prediction, making the tool transparent and trustworthy rather than a black box

- Packaged the entire pipeline into an interactive **Streamlit application**, allowing a chemist or researcher to input a molecule and instantly get a toxicity risk profile with visual explanations
- *Potential impact:* tools like this can help **pharmaceutical researchers filter out unsafe drug candidates early** in the discovery pipeline, reducing costly late-stage failures and animal testing, and accelerating the path to safer drugs

PulseIQ (SmartMill Framework) – Raccoon AI Innovation Challenge (NIT Rourkela)

March 22, 2026 – April 10, 2026

- Designed **PulseIQ**, a camera-based advisory system for *dal (pulse) milling units* that uses computer vision to analyze raw grain samples and recommend the optimal milling settings in real time
- Built on the **SmartMill Framework** using MobileNetV3-Small for lightweight, on-device image classification, making it deployable on low-cost hardware in rural milling units without needing expensive servers
- Incorporated **ICAR-CIPHET research data** on grain quality and milling efficiency to ground the recommendations in scientifically validated agricultural standards
- Structured the solution as a **SaaS offering**, with millers paying a subscription for access to the advisory dashboard and analytics, creating a sustainable revenue model for ongoing support and updates
- Iterated through 4 major product versions, incorporating direct feedback from farmers and mill operators to refine usability and accuracy
- *Potential impact:* dal milling in India often suffers from **inconsistent quality and avoidable grain breakage due to incorrect milling settings** — PulseIQ could help small and mid-sized mills **reduce grain wastage, improve output quality, and increase profitability** without large capital investment in new machinery

Prompt Wars Competition – 1st Prize Winner

Kolkata

- **Won 1st Prize** by crafting *precision-engineered prompts* that achieved exact expected results with consistent accuracy
- Demonstrated advanced **prompt optimization techniques** including *iterative refinement, context engineering, and output formatting specifications*

TOOLS AND PLATFORMS

Automation & Integration: n8n, Zapier, Make

CRM & Sales Tools: GoHighLevel, Follow Up Boss

Development Tools: Google Antigravity, Replit, Lovable, Pinokio, Invoke Community Edition, LM Studio, ComfyUI

AI Platforms: Stitch, Google Flow, Pomelli, Notebook LLM, Google AI Studio (Google Labs)

AI MODELS AND FRAMEWORKS

Large Language Models: ChatGPT, Claude, DeepSeek V3, Qwen, Mistral, Gemma 2

Specializations: Prompt Engineering, Voice AI Agents

SKILLS AND INTERESTS

Programming Languages: Python, JavaScript, TypeScript, Java, SQL

Web Technologies: React, Tailwind CSS, Next.js, HTML, CSS, WordPress, JSP

Backend & Databases: Node.js, Express, FastAPI, MySQL, PostgreSQL

AI and Automation: Claude API, Retell AI, Prompt Engineering, MCP Servers, n8n, Zapier, Make

Interests: AI-powered applications, voice agents, prompt optimization, web development, automation, innovative problem-solving
